Subject: PH data retreat follow up
Date: 05/10/2009 12:33 PM

Hey Folks -

Not sure if this has happened already- but it would be good to have a call with the spatial data (GIS) folks who have been involved with the PH AOPC development and other aspects of RI data review/FS preparation. This should be a follow-up on the remedial scenario analyses that were presented at the data retreat including what was done, methodology, who has the up-to-date analysis and where will it be posted so all can have access. NOAA is happy to share our GIS project, which includes past analysis by NOAA, the government team, and the RP- in addition to our data sources.

Other topics should include finishing up the AOPC analysis (next steps), data presentation and what else is on the horizon for spatial analysis. I suggest an hour for this call- early this week (Tues AM?) perhaps? Carrie- since you're just coming back could you please put out some dates that work for you?

All of the preparation and analysis that people brought to the data retreat was evident and I think really helped develop a better understanding of the contaminant distributions, AOPCs and remedial scenarios and spatial context- I think the team approach worked well!

Ben
